SUBJECT INDEX TO VOLUME 8

Aerodynamic classification of fibers with aerosol centrifuges, 37

Cryptocrystalline relationships of silica phases in chert, 111

Deposition of submicron aerosol particles during integrated circuit manufacturing: theory, 209

Determination of inertial efficiences and dust free zones of electrically enhanced collectors, 21

Development of surrogate lung systems with controlled themodynamic environments to study hydroscopic particles: air polutants and pharmacologic drugs, 1

Eulerian and Langrangian simulation of particle deposition from a point source in a turbulent channel flow, 145

Heat transfer measurements of a 1.0 ton-steam/hr circulating fluidezed-bed combustor burning Taiwan coals, 199

LDV measurements of solid-liquid slurry flow using refractive index matching technique, 97

Loadlock: an attractive location for monitoring particles in process, tools, 137

Monodisperse droplet generation by spontaneous condensation of steam in nozzles, 55

Novel quick-closing probe for measuring local particulate phase density in gas-particle suspensions, 167

Particulate motion and concentration fields in centrifugal slurry pumps, 77

Pyrite particle size distribution and pyritic sulfur reduction in crushed coals: a preliminary report, 123

Stimulated Raman scattering of aqueous droplets containing ions: concentration and size determination, 179

Thermocapillary migration of slightly deformed droplets, 191
